

MAKING TRANSFORMATION STICK: From Human Workflows to Surgical AI

THE PROBLEM: PILOT PURGATORY

Most digital initiatives fail because they ignore the human element. At Eukodyne, we prioritize Organizational Health over software features. Join us for a "Diagnosis to Cure" session that ensures your transformation survives the plant floor.

STEP 1: THE HUMAN FOUNDATION

AI Readiness Assessment | Featuring Rashmeet Sangari

We begin by ensuring your team is prepared for the shift. Transformation only works when it sticks. We assess the cultural and operational readiness of your organization before the first line of code is written.

STEP 2: THE GENERAL PRACTICE

Bridging the "Excel Gap" | SparkHub7 Agentic AI

We stabilize the floor by closing the gap between manual workflows and digital truth. Watch as we transform siloed customer feedback into proactive operator guidance, ensuring the "Voice of the Customer" dictates the "Action on the Floor."

STEP 3: THE SURGICAL CURE

High-Resolution Physics | 26M Messages Per Second

Witness our breakthrough GPU-Broker in action. Using a custom HiveMQ extension and NVIDIA CUDA architecture, we process 26 million messages per second on sovereign, \$5K hardware. Detect high-speed failure precursors that standard systems miss, without the prohibitive cost of cloud data ingestion.

THE RESULT

A factory that finally hears its customers and sees its machines with absolute clarity.

- Sovereign: Own your hardware, own your data.
- Sustainable: Eliminate cloud overhead and "Pilot Purgatory."
- Scalable: From human-centric workflows to high-speed data physics.
